

Vendor Name: InnovateX Technologies

1. Cost

The total estimated cost for our solution is \$460,000. This amount covers system architecture, platform development, initial deployment, and post-implementation training.

2. Technical Approach

InnovateX Technologies will design an end-to-end solution using a cloud-first approach. Our tech stack includes AWS Lambda, DynamoDB, Node.js backend, and Vue.js frontend. We ensure scalability through serverless deployment and secure all communication using AWS IAM and encrypted APIs.

Our team follows SCRUM methodology and emphasizes weekly sprint reviews with stakeholder feedback.

Key Features:

- AI-driven summarization of documents
- Secure audit trails with blockchain
- Cloud-native CI/CD with AWS CodePipeline
- NLP-based search and classification

3. Past Performance

Over the past 4 years, InnovateX Technologies has supported multiple digital transformation initiatives with public and private sector clients.

Achievements:

- Developed a procurement evaluation system for a state agency.
- Migrated legacy databases for a national telecom provider.
- Achieved "Very Good" CPARS ratings for usability and cost control.
- Clients report satisfaction with our post-delivery support and scalability.

Our focus is on sustainable design, transparent reporting, and continuous improvement.
